Abstract: Digital libraries of the future will be able to store video data as well as text data. For this reason, retrieval technology is essential for effectively handling video data. We have developed a new video data retrieval system that uses color distribution and the moving direction of detected object regions as the **featured information**. Motion vectors and DC coefficients in MPEG-2 data are used to generate **featured information** to be stored in a database. GUI is used to enter the features of a desired object so that a search can be made for similarities contained in the database. Then **several items** of highly similar data are displayed as the retrieval result. Our prototype system achieved retrieval precision of 0.83 using color information. Typical retrieval time varied from 9 to 95 seconds on a 166 MHz Pentium PC, according to the number of similar candidates. The paper describes our new content based retrieval system for video data. (5 Refs)

Abstract: We describe our concepts to visualize very large amounts of data. Our visualization techniques which have been developed to support querying large scientific databases are designed to visualize as **many** data items as possible on current display devices. Even if we are able to use each pixel of the display device to visualize one data value, the number of data items that can be visualized is quite limited. Therefore, in our system we consider only those data items which are 'close' to a user specified query. The data items are arranged according to their distance from the query. Multiple **windows** are used for the different **attributes** of the **data** and the distance of each of the attributes from the query is represented by color. After briefly describing the basic ideas of our visualization techniques, we focus on two specific issues which arise in connection with our visualization techniques. First, we compare the data space which is the amount of information available in the database to the visualization space which is the amount of information that can be visualized by our visualization techniques. Second, we discuss the usefulness of different color models for our distance to color mapping and define a new color model which produces adequate color scales. (16 Refs)

Title: What good is self? (Pascal, data encapsulation)

Author(s): Tylutki, G.

Journal: Computer Language vol.7, no.11 p.77-9

Publication Date: Nov. 1990 Country of Publication: USA

CODEN: CSAEEU ISSN: 0749-2839

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: Information hiding is an important component of modern programming theory. With object-oriented programming encapsulation enables or requires one to hide information and the routines that manipulate it; they are enclosed in an object. Pure object-oriented languages prohibit accessing an object's **data fields** from outside the object, but Turbo Pascal does not enforce this. Borland's object-oriented Pascal does not support private variables and thus cannot enforce data encapsulation. One

can fight name-space pollution, at least between modules, and make code more maintainable with the technique mentioned. Turbo Pascal lets one create reusable units containing reusable objects that can be extended. One problem is that some of an object's methods should be private. The author considers a text-based **windowing** system. The **WindowType** object has **several** data items, such as the x and y screen coordinates, the **window**-frame type and color, and a pointer to a buffer to store screen contents.

Treatment: Applications (A)

Abstract: TopView is a **windowing** system, a system that lets you have more than one program active at a time, and lets you switch from one to another with ease. Unlike its competition, TopView really has what it takes to work in a practical way with the PCs in use today. What sets TopView apart is that it has the skill to work with just about any PC and any software. As a character-based, (and not a graphics-based or star-type) system, TopView works with either monochrome or graphics PCs. Even more important, though, TopView is extraordinarily good at accommodating programs and making them work well in the TopView environment. In effect, TopView lets you put together a loosely integrated package from your own choice of parts. You can choose your favourite word processor, spreadsheet or programming language and make them all work together. TopView has a user interface that includes **windows**, panel areas on the screen, keyboard control, cursor control, **mouse** control, list scrolling, **item** selection, **multiple - field data** input with prompting and more-an impressive array of sophisticated program support. Abstract: A useful **feature** of **data** base systems is to allow the user to change the order in which fields appear in the columns of a table. The purpose of this study was to compare the usability of seven different user interfaces for performing this task in the Microsoft **Windows** environment. The fields to be reordered were file name, file number, size, and creation date. The seven approaches studied covered a range of interaction styles, including **dragging** and dropping, menu selection, text entry, and button pressing. Fifteen **Windows** users completed a set of two practice trials using each approach, followed by a set of twelve main trials. For each trial, the user was shown the current order of the fields and a target order to change to. The completion times showed significant differences according to the approach used. Overall, a data-selection technique using radio buttons and a data-entry technique using a single entry area were significantly faster than all of the others. Another data- **entry** technique, involving **multiple entry** areas, was consistently the slowest. Somewhat surprisingly, given the current trend toward direct-manipulation interfaces, the two approaches involving **dragging** and dropping were not among the most effective approaches. (Author abstract)

ABSTRACT: The paper is deals with a method of designing a data generator
for an FEM analysis system. A new design support system for FEM has
been developed with Smalltalk-80, an object oriented language. The
system has the following **features** : 1) Input **data** is evaluated as an
ordered collection which is constituted with **multiple** structure
Keyword . 2) Keywords are classified into four patterns with common
messages. 3) Each Keyword and its **attribute data** has helpBox, a
window for the format information. 4) The system has a special
multieditor utilizing category concepts of Smalltalk-80. Since these
facilities are integrated in Smalltalk environment, man-machine
interface such as **window** and **mouse** can not only be used for easy or
efficient development but also it shortens design process. (author
abst.)

A very favorable review of Marcon Plus (\$1495), a text-based management
system from Airs Inc. of College Park, MD (301). Notes that it requires
512K RAM, a hard disk drive, and DOS 2.0 or later. Says that it offers a
variety of features including saved queries, prestored **data - field** types
by a variety of indexes and lists, **multiple data entry fields** and
multiple database searches. Mentions that the interface makes use of
pop-up **windows** . Contains one screen display and a photo of the program.

RECORD TYPE: Abstract

ABSTRACT: AskSam Systems' \$149.95 AskSam for Windows can handle both structured and unstructured information. The free-form database offers the same features as other common databases, such as the ability to sort fields and manage reports. However, it goes much further by allowing users to make searches with several words or fields, and by not limiting the user to

a fixed **data field** structure. It has some features of a word processor, letting users create and edit documents and apply formats. Users can conduct Boolean or proximity searches, and even offers some personal **information management features**. The product is very easy to use, and allows those who are more familiar with the older DOS version to use the command line. Inputting data into the database is easy and flexible. It can be typed directly or imported from elsewhere. The program offers automatic field recognition for importing, and will recognize field identifiers placed in the text to be imported.

WORD COUNT: 3809 LINE COUNT: 00302

ABSTRACT: Microsoft's Windows 95 operating system provides multithreaded, preemptively multitasking, 32-bit computing, but it is not revolutionary, and it is not state of the art. The disappearance of DOS is largely an illusion: the IO.SYS and MSDOS.SYS system files are combined into WINBOOT.SYS, which calls itself MS-DOS when viewing RAM with the MEM utility listing. Most of the vulnerable operations have been moved out of the V86 mode and into virtual devices (VxDs), the most important of which is file access. The Installable File System (IFS) has been added as a new layer of VxD processing, which makes possible long file and directory names. Two sets of APIs operate within Windows 95: one for new 32-bit applications, and one for so-called Win16 applications. The two are not complete, however, in that they do not separately implement all of the calls: Win16 calls are implemented in existing 16-bit DLLs, and others are passed to new 32-bit code. The benefits Windows 95 provides for network management are examined.

... on page 56.)

Long names are handled midway along the route between intercepting all file access within **Windows** and actually performing file access. The names themselves are stored using **multiple FAT entries** for each file. An old-fashioned 8.3 entry heads up the file, followed by one or...

...one short, one long--with the latter stored in a third-rate but marvelously DOS-compatible patchwork **data field**.

Another important change that's less visible is greatly expanded detail on the use of the system.

WORD COUNT: 4874 LINE COUNT: 00376

ABSTRACT: Borland International's \$495 dBASE for Windows, the long-awaited Windows version of dBASE IV, is a versatile DBMS that is heavily reliant on coding. However, this package treats code as objects for the most part, rather than as the traditional procedural code types that are prevalent in the DOS versions. Stronger SQL database support, a flexible forms-generation tool and easy Windows API access are among the new features in this product. The package is built around standard user interface objects and an extensible database architecture; object-oriented languages are heavily leveraged, as are SET RELATION extensions for non-procedural referential integrity. Designers will spend a good deal of time in the Form Designer, which performs the layout of controls and forms that the end-user will use. In this feature, the Object Inspector is used to specify methods, events and properties for the form and its controls. The package has a number of innovative features, but at times seems a bit complicated for routine tasks.

ABSTRACT: Software developers can modify data entry screens contained in Microsoft's FoxPro for Windows and FoxPro for Macintosh database application development packages to optimize them for text-based data

input. Many of the screens found in the FoxPro packages are not designed for heavy keyboard data entry. They are often visually oriented, making it difficult for experienced, heads down typists to use them. FoxPro prototype screens also often require users to switch between the keyboard and the mouse, thus breaking the typing rhythm of experienced typists. Screen readability is another factor as many FoxPro screens use small font-sizes in input fields. To eliminate these problems, developers should modify data entry screens to look like documents as much as possible. Large fonts such as 11-point Arial and 12-point Courier News should be used and there users should not have to rely on the mouse. Screen contrasts should also be reset to maximize readability.

ABSTRACT: The Windows NT Registry is a secure, central data base that describes in detail a system's hardware configuration, installed software, security status, desktop settings and file associations, applications and profiles that support OLE. Users can modify the Registry with a variety of bundled or third-party tools, including the Control Panel, the NT Setup application and third-party configuration disks. The Registry brings order to a function that is complex and fragmented in Windows 3.1: The Registry is a robust tool for use in an NT multiuser environment; for example, network managers can study and modify the Registry remotely. Windows NT has a single API for accessing configuration data. Examples of Registry use are given and explained in detail.

ABSTRACT: Now Software Inc's \$99 Now Contact contact manager is tightly integrated with the company's Now Up-to-Date calendar package; the two are available as a bundle for \$179. The two primary **windows** display contacts in list and detail views; the detail **window** layout is broken down into 'frames' of related information. Now Contact does not provide visual clues to show that the user has entered **information** in several **fields**. There are **several data - entry assistance features**, including automatic capitalization of names and states and automatic insertion of parentheses and dashes into phone numbers, but all these are turned off by default; activating them is a tedious procedure. Contacts can be grouped into categories and sets and assigned keywords via a floating palette. A handy QuickConnect control panel places a telephone icon in the menu bar for fast contact searching. Now Contact is more tightly integrated with Now Up-to-Date than Aldus' Touchbase Pro is with its companion Datebook Pro, but the two programs do not have an entirely common interface. It is an ideal choice for those who already use Now Up-to-Date.

ABSTRACT: Lotus Development Corp's 99-pounds-sterling Lotus Approach 2.1 and Claris Corp's 275-pounds-sterling FileMaker Pro 2.1 stand head and shoulders above the four other Microsoft Windows-based database management systems (DBMS) for end users evaluated in National Software Testing Laboratories (NSTL) tests. While Microsoft Corp.'s 330-pounds-sterling Microsoft Access 1.1 may appeal more to power users, end users will find viewing related data from different tables confusing with this program. FileMaker Pro performs faster than Approach, but is weaker at constructing and using relationships between tables. Its ability to substitute repeating fields for relational links overcomes some of this weakness, however, and FileMaker's support for cross-platform links with the Apple Macintosh version will prove attractive in some installations. Approach is more well-rounded, and would make the best front end for a client/server applications produced by a sophisticated database development package.

ABSTRACT: Lotus Development Corp's \$395 Lotus Approach is a strong non-programmable database management system (DBMS) for Microsoft Windows. The package is priced at \$99 until Dec 31, 1993. Approach has no native format in which it stores data. Instead, records are stored in whichever format the user selects from a number of popular options. Approach is generally easy to use. Writing macros is performed in a single, complex dialog box. Full relational capabilities, strong search functions, and tools to access databases on mainframe computers and minicomputers make Approach among the more powerful non-programmable DBMSs. Data can be viewed as forms, form letters, mailing labels or reports. A tables is just an editable kind of report, but this causes records of more than 255 characters to wrap from line to line.

ABSTRACT: Datacap Inc's Paper Keyboard Pro is a \$1,495 software package for data entry that recognizes hand-written text, check boxes and typewritten text within a form. The Microsoft Windows -based program employs a number of scanners that collect data and store it in a microcomputer database. Users first design the form to be used for data entry. Forms can be created with any of several Windows -based word -processing, forms-design or desktop-publishing programs such as Microsoft Corp's Word for Windows , FormWorx Corp's Form Publisher for Windows and Aldus Corp's PageMaker. Paper Keyboard displayed outstanding recognition times during evaluation tests; it took five seconds to process a form with 20 characters of handwritten data and 520 check boxes. The product failed to recognize handwritten letters that were not dark enough or that went outside the boxes.

**Spreadsheets: easing data consolidation. (Software Review) (overview of
five evaluations of spreadsheet programs that offer data consolidation
features) (evaluation)**
Harty, Paul
PC Week, v7, n11, p104(4)
March 19, 1990
DOCUMENT TYPE: evaluation ISSN: 0740-1604 LANGUAGE: ENGLISH
RECORD TYPE: FULLTEXT; ABSTRACT
WORD COUNT: 548 LINE COUNT: 00043

ABSTRACT: Six spreadsheet packages with data-consolidation features are reviewed: Borland International Inc's Quattro Pro, DacEasy Inc's Lucid 3-D 2.2, Lotus Development Corp's 1-2-3 2.2, Microsoft's Excel for Windows 2.1 and Excel for Presentation Manager, and WordPerfect Corp's PlanPerfect 5.0. All the programs use linking features to consolidate multiple worksheets. The linking syntax used by the programs varies in flexibility; an effective syntax can recognize range names instead of just cell locations. Data integrity is a potential problem for some users. Lucid 3-D offers an unusually good price/performance ratio at \$99.95, while the other products all list for \$495. Excel uses the Dynamic Data Exchange (DDE) feature of Windows and OS/2 to exchange data between worksheets and other applications. Lotus 1-2-3 2.2 is compatible with other Lotus products, while PlanPerfect uses the same interface as the WordPerfect word processor.

ABSTRACT: Text-based management systems (TBMSs) can be used to merge database and word processing capabilities in order to maintain and manipulate text. A feature of TBMS fields is that they can be of any size. TBMS also offer full-screen editors, advanced retrieval functions, and variable-length records and fields. A totally free-form TBMS allows flexible data entry; the controlled free-form variety of TBMS allows for a conventional structure. TBMS programs can be used to import ASCII files. Microsoft Word v6.0 Reaches Out (Applications)

Bruce Robertson

NETWORK COMPUTING, 1994, n 504, 134

JOURNAL CODE: NWC LANGUAGE: English

RECORD TYPE: Fulltext

SECTION HEADING: Hands-On

TEXT:

Grab data from a SQL database server and insert it into a word processing document. It sounds easy, but many word processors can't do this simply or in a single step. They require a desktop database application to move the data from the database server to the desktop before you can import the data into your word processing document. Microsoft Word v6.0, however, uses Open Database Connectivity (ODBC) drivers to download data from a SQL database server into a Word document in a single step. Word v6.0 also supports data from other word processors, spreadsheets and common desktop databases, such as Access, dBASE and Paradox. To keep track of what data you want retrieved into a document, Word v6.0 stores detailed specifications in a -database field- in the document. To actually fetch data into the document, you select the database field, click the right mouse button and select the option to update the data. Word v6.0 uses the specifications in the document's database field to fetch data directly via the ODBC drivers. Creating arcane instructions for the database field could be a formidable barrier between users and their data. Word v6.0 wisely uses the new Microsoft Query applet to help users formulate these instructions. Drag -and-drop access to database tables and columns, conditional searching and other database query features mean the user doesn't need to master SQL syntax. Advanced users can set up or modify database fields manually, but for most users MS Query is the way to go. Oddly enough, MS Query and the ODBC drivers do not ship with Word v6.0, but they do come with Excel v5.0 or the Microsoft Office v4.0 suite. Microsoft claims that either Excel or Office is installed in the majority of corporate accounts in which Word is deployed. Connecting to the database server requires the usual RDBMS middleware for your Windows client platform (see the -MS Word Reaches Out To SQL Server- diagram on page 136). We used Microsoft SQL Server as our remote data source, so we configured our Word v6.0 client workstation with SQL Server's DB-Library and Net-Library middleware. Step-by-Step to Remote Data After opening a Word document and placing the cursor where the downloaded data should go, choose Insert and then Database. Word displays a "Database" dialogue box with three choices: "Data Source," "Data Options" (query options and automatic formatting) and "Insert the Data into the Document."/P First, specify the data source. Clicking on the "Get Data" button opens the "Open Data Source" dialogue box, and the MS Query button there loads MS Query directly via Dynamic Data Exchange (DDE) calls. Within MS Query, choose a database server and the tables from which you want to draw data. In our tests, MS Query was able to pick up data from the Authors, TitleAuthor and Titles tables in a sample Pubs database. Joins of multiple relational tables work as well. While joins can be specified directly in SQL syntax in the database field, MS Query matches similarly named columns in tables automatically as joins, and lets the user delete, create and modify joins flexibly. MS Query shows joins graphically. In our example, the three tables were joined by lines between the key columns. Once you've chosen your data source, you can use query options to customize your query. You can select specific columns, subset filters and sort orders with MS Query's point-and-click interface, or you can use Word's own "Query Options" dialogue box. We found MS Query's

interface easier, though Word's "Autoformat" dialogue lets you choose from a number of tabular formats for presenting data. Finally, click the "Insert the Data into the Document" button and choose whether to insert the data into the document as copied data or a dynamic database field. Copied data is just that: a copy of the database data at one instant in time. A dynamic database field is like the more common paste link. It allows the data in the document to be updated with fresh data from the database server with a simple mouse click. Mail merge works very easily against remote data sources as well. A similar three-part dialogue takes you through connecting to the remote database and setting up the merge document. A simple toolbar shows available merge fields and lets you scroll through the records in the database while observing the results in the merge document. A "View Merged Data" button lets you view either the merge fields or the database data itself in the document, so previewing the merged information is very easy. A Few Quirks Word v6.0 is best at processing words or, in this case, lists of words. When the PubDate field from the SQL Server Pubs database was inserted into Word v6.0 (in either the table or merge formats), it came out with the full time specified as well ("1985-10- 21 00:00:00.000"), and there was no way to reformat that value in Word. Since Word can't reformat nontext data easily, date/time fields or currency formats are better handled in a tool such as a spreadsheet or database query tool. You could then paste that table into the Word document if necessary. After the original setup using MS Query, you can edit the database field string manually in Word. Column names, for example, can be changed with normal SQL syntax. We used "authors.au fname 'FIRST NAME' " to pair the actual field name "au fname" in the Authors table with the column label '"FIRST NAME."' Inexplicably, this information was not retained from the original query setup in MS Query; we had to add it back in by editing the database field manually. The only other problem we encountered was an occasional " ODBC cursor error" message. After discussions with Microsoft, it's still unclear why this intermittent error appeared. Overall, however, Microsoft's Word v6.0 works very intuitively and seamlessly when importing remote data. Bruce Robertson can be reached on the Internet at robertson@nwc.com.

You can send and receive messages over a wide area network, modem, LAN or via a wireless connection with cc:Mail Mobile for **Windows** 2.0. This portable version of the LAN-based e-mail system is aimed at mobile users who only occasionally connect to a LAN. With it, you can automatically filter incoming messages based on a variety of criteria such as author, date or size to access important messages without having to sort through all of them. The package includes icon-based location profiles, which can be altered with a single **mouse** click, to connect from often visited destinations. More than 40 location icons (hotel, home, office, cities, countries) ship with the product; you can also add your own icons (a corporate logo, for example). Pick lists guide you in setting the communications type, serial port parameters, baud rates and dialing options for each location. The program supports long-distance access and credit-card calling. You can select as many as eight communications methods per location, from among such protocols as IPX/SPX (NetWare), TCP/IP (UNIX) and X.25. cc:Mail Mobile also supports connections via ISDN, PBX, direct connection, RAM Mobile Data, cellular and landline modems. The package includes scripts for more than 70 popular modems and supports background operation. A preview function lets you gather information about incoming messages, such as estimated transmission time, subject, priority, author, size and attachment names. cc:Mail Mobile offers built-in support for reconciliation when switching between LAN and remote operation. It moves messages to the computer on departure from the LAN and resynchronizes your LAN mailbox when you reconnect. cc: Mail Mobile 2.0 Price: \$195 Contact: Lotus Development Corp., 800-448- 2500, 415-961-8800

Notework Gets an (Inter)Face Lift In the past, the Notework LAN e-mail interface wouldn't have won any beauty contests, but ON Technology has upgraded the program with a **Windows** interface. According to ON Technology, the prior interface was transitional, to provide support for both DOS and **Windows** users. In the new version, a button bar has been added to the pop-up menus. The bar includes icons for such commands as open, create, reply and discard. There is also a Put Away function that allows you to look at e-mail later without having to discard it or place it in a folder. Notework 3.0 offers **Windows** ' Clipboard support, scroll bars, dialog boxes, resizable **windows** and the ability to select your own fonts. The Speed Read function automatically tags new messages and displays the first message upon sign in. You can display incoming and out- going messages side by side. Notework 3.0 Price: Engine, \$199; Ten-user package, \$590; upgrades from 2.0, \$19.95 per user; or from 1.0, \$29.95 per user Contact: ON Technology, 617-374-1400, fax 617-374-1433

Access UNIX E-Mail with a **Windows** Laptop

Frequent UNIX e-mail users can read and respond to their mail off-line and off- site with PC or laptop using Portable Mail for **Windows** . The software can download UNIX mail files so you can display, save, answer and manipulate mail using the **Windows** GUI . The interface includes an icon bar, accelerator keys for most menu operations, a graphical customization **window** and a status bar. When you get back to your UNIX workstation, Portable Mail can upload mail changes and send replies, delete requested messages, compose multiple messages simultaneously and store flagged messages in mail folders. All off-line actions are automatically reconciled. You can create a remote post office on any **Windows** computer, then transfer files with transfer software or via a diskette. You can perform mail functions, including printing and saving messages, off-line without logging onto your workstation. Portable Mail is compatible with BSD mail and SVR4 mail, and offers cut-and-paste to and from other **Windows** applications. Portable Mail Price: \$195 Contact: Qualix Group Inc., 800-245-8649, 415-572-0200

Fax Software/column

Get Control of Faxes on the LAN FaxWorks Pro LAN, a network-independent fax software package for small- to medium-sized LANs, lets networked **Windows** users send, receive and manage their faxes. The program does not require a dedicated fax server, and is compatible with several popular peer-to-peer LANs, including Micro-soft **Windows** for Workgroups, Artisoft LANTastic, and Novell NetWare and NetWare Lite. The package includes all the features of SofNet's FaxWorks Pro. Because it has full OCR functionality, FaxWorks Pro LAN does not require you to retype received faxed documents. It has personal and shared telephone books, logs and file cabinets. FaxTracker, the program's document retrieval and storage tool, brings up a document log that lists scheduled and concluded faxes. FaxTracker can also display the results of a search and provides specific fax information, such as the file name, type and size. FaxWorks Pro LAN features automatic Group 4 compression and supports up to eight fax lines per fax server. FaxWorks Pro LAN supports Class 1, Class 2 and CAS-compatible fax modems (such as Hayes JT Fax, Brooktrout and GammaLink fax modems), and lets you send and receive faxes through electronic mail packages, such as Lotus cc:Mail, Microsoft Mail or any MHS e-mail package. FaxWorks Pro LAN Price: Two -user pack, \$199; P 10-user pack, \$599; 50-user pack, \$1,799 Contact: SofNet Inc., 800-FAX-WORKS, 404-984-8088 Circle Inquiry 562

Device Lets Fax Machines Handle OCR Trio Information Systems has bundled its DataFax+ **Windows** 4.1 faxing software with its FaxConverter, a pocket- sized device that converts a fax machine into a scanner or local printer. With the FaxConverter, you can scan a document into your PC or print documents on your fax machine. DataFax+'s optical character recognition (OCR) engine transforms scanned documents into editable text. In the new version of DataFax+, the OCR engine features improved ligature recognition to allow it to distinguish among letters that touch each other, according to Trio Information Systems. Once faxes are OCR-processed, they can be imported into a variety of application formats, including .RTF, ASCII, Lotus 1-2-3, Ami Pro, Excel 2.0, Word for **Windows** 2.0 or 6.0, WordPerfect 5.0 or 5.1, and Type Reader 1.0. The DataFax software includes a Captive QuickFax icon which lets you clip data from an application, add a fax address and send it. The Smart Dialing feature lets you add country, area and long distance dialing codes to your dialing directory. Also included are a cover page editor, which lets you create language-specific forms in 20 languages, and a Fax Management feature to log incoming and outgoing faxes. DataFax+ 4.1 and FaxConverter Price: \$129 Contact: Trio Information Systems Inc., 800-880-4400 919-846-4990 Circle Inquiry 563

RightFAX Supports Binary File Transfer Binary file-transfer support, which allows files to be faxed as editable documents, has been added to RightFAX 3.5 fax server software. The software lets multiple users on Novell NetWare, Microsoft LAN Manager and IBM OS/2 LAN Server-based networks send and receive faxes from individual workstations. RightFAX 3.5 incorporates direct inward dial, dual tone multi- frequency, OCR, and manual and channel auto routing technologies. The software complies with VIM 2.0 and can operate from within Lotus Notes. With the optional RightFAX E-mail Gateway (\$995), RightFAX 3.5 lets you send and receive faxes directly from e-mail systems. RightFAX includes a **drag** -and-drop feature that allows you to send files as either fax documents or binary data files by **dragging** them onto an icon or **window** . With the RightFAX OCR module, available for \$1,195, RightFAX routes incoming faxes on the basis of key words found on the fax's cover page. You can build routing tables to direct the fax to the recipients with one of **several keywords** associated with that user. If the fax server is busy, an alternate workstation can be used to perform fax routing. RightFAX supports several GammaLink and Brooktrout fax boards, as well as the Brooktrout TR-114 fax cards. RightFAX 3.5 Price: \$995 (license for a single channel, unlimited users); upgrades from RightFAX 3.0, \$99 Contact: RightFAX, 602-327- 1357, fax 602-321-7456 Circle Inquiry 564

Pim/Contact Managers Manage Contacts and Tasks with One Program Time Planner Deluxe 2.0 bridges the gap between PIMs (for tracking names and addresses) and project management systems (for tracking project deadlines and resources). The program is designed for task-oriented users who need reports that compute project times and costs and offer a time-line view of task duration (in working or elapsed hours). TPD supports priorities, alarms, recurring events and **drag** -and-drop scheduling. You can set constraints

(hours per day and days per week) or time increments (five minutes or longer), as well as view a graph of allocated costs over time. The address book accommodates three addresses and six telephone numbers per entry, and includes an autodialer. You can also place information in folders and assign a keyword to a folder for automatic assignment to the appropriate folder on the basis of the note's text. Time Planner Deluxe 2.0 Price: \$129; until June 30, \$59 Contact: H.M. Hinsch & Co., 800-952-3530, 718-237-1977 Circle Inquiry 568

Commence Keeps Customer Contacts Current The latest upgrade of the Commence contact manager is highlighted by more than 15 new features, including e-mail interfaces and a more powerful search capability. Version 2.1 retains familiar features, including the address book, appointment calendar, note keeper, to-do and task list manager and travel expense tracker. The new version adds the ability to send e-mail using Commence's Agent technology. Messages can be sent via popular e-mail messaging protocols, such as MAPI (Microsoft Mail), VIM (Lotus's cc: Mail and Notes) and CMC. The fuzzy logic global search capability can find information even if you're unsure of the spelling. Version 2.1 includes a report formatter for altering the width and height of items on a report, or for resizing rows and columns with the mouse. Commence can now play sound files or video clips when a predefined situation occurs. The new version also adds user interface features, such as direct appointment entry in the calendar view, maintenance of window size and position, and integrated letter writing support for Word 6.0 and WordPerfect 6.0. Commence 2.1 Price: \$395; upgrades, \$29.95 to \$69.95 depending on version Contact: Jensen-Jones Inc., 800-688-7080, 908-530-4666 Circle Inquiry 569

Software Ties Up Contact Management Loose Ends CrossTies 1.0 uses patent-pending object-oriented technology to manage information. The program lets you assign a name of up to 256 characters in length to an information item, then link that information to other types of data and view all related items on a single screen. You can drag and drop information between related elements (people, documents or activities) or use the QuickLink button to associate different types of information. CrossTies can store and track information about people in 30 preformatted fields, or in a notes field. You can define templates to prefill fields with standard information and place frequently used objects on the "Shelf" for quick access. The Trail button allows you to access your most recent work. The scheduling module notifies you of upcoming events and prints daily, weekly and monthly calendars. A built-in viewer lets you view documents from a variety of programs. CrossTies 1.0 Price: \$149 Contact: CrossTies Software Corp., 800-955-TIES, 214-407-9996 Circle Inquiry 570

Business Productivity Tools Automate Repetitive Document Production HotDocs helps you build intelligent templates using Word (versions 2.0 and 6.0), WordPerfect (5.2 and 6.0) and Ami Pro (3.0) documents. The templates allow you to create forms that automatically prompt the user to fill in the blanks. The program automates the production of repetitive, routine word processing documents from business letters to loan agreements by letting you identify text that will change with each new document (such as dates, names, adverbs or pronouns) and replace it with a variable. To assemble a document using a finished template, you simply click on a button. The template asks questions based on the user-defined variables and inserts the new information. You can specify formats for the variables, so that information is displayed in the correct format automatically, no matter how it is entered. The program includes options to replace pronouns (his/her) with the proper gender, and can conditionally replace text. HotDocs 1.0 Price: \$99; introductory price, \$49 Contact: Capsoft Development Corp., 800-500-DOCS, 801-375-6562 Circle Inquiry 571

Software Simplifies Employee Evaluations Two new software packages offer help to managers faced with the difficult task of conducting and documenting employee performance reviews. Austin-Hayne's Employee Appraiser using a "writing by example" approach, presents a series of prompts to help managers through the appraisal process, offering suggestions on topics, such as initiative, job knowledge and communication. The program lets managers work with and edit over 400 professionally written phrases and paragraphs developed by human resource and labor law experts. Employee Appraiser can scan the completed appraisal for inappropriate language. When it finds potentially troublesome language, the software offers possible alternatives. The program's Manager's

Notebook helps document important events on a day- to-day basis for inclusion in later reviews. Avantos Performance Systems' Review Writer uses a Quick Build mode that leads the review writer through questions that gather key information and a Document mode for more experienced users. Users click on icons to get help in specific areas. The program can import goal and performance information from Avantos' ManagePro, an employee management program. Review Writer can also incorporate comments on objectives and performance recorded in ManagePro. The program can suggest actual text, prompting users to agree or disagree with statements about a performance area or skill. The writer can select all, some or none of the generated review text. The program includes predefined sample templates for general job titles, such as managers, team leaders and customer service agents. Its AdvisorScan searches for inflammatory or "dangerous" language and offers alternative wording. Employee Appraiser 1.0 Price: \$129 Contact : Austin-Hayne Corp., 800-809-9920, 415-610-6800 Circle Inquiry 572 Review Writer 1.0 Price: \$129 Contact: Avantos Performance Systems, 800-AVANTOS, 510-654-4600 Circle Inquiry 573 Write Better Business Letters Instead of staring at your blank word processing screen wondering what to write, let the LetterWorks series of letter templates get you started. Using the program's ViewWorks front end, included with all LetterWorks products, you can select a sample letter , then use the program's hints to help you produce professional documents for different situations. ViewWorks' Find function searches documents for keywords or phrases, and the built-in word processor lets you customize a selected document, then send the text to your own word processor for further editing. Business LetterWorks includes 400 letters covering customer relations, credit and collections, personnel relations, internal communications, community service, and sales and marketing. Legal LetterWorks includes 165 legal forms for business and personal use, such as wills and living wills; real estate (leases, sales and mortgages); borrowing and lending; copyrights and trademarks; powers of attorney; starting, buying or selling a business ; and operating a corporation. Business LetterWorks 1.1, Legal LetterWorks 1.1 Price: \$79.95 each Contact: Round Lake Publishing Co. Inc., 203-438-5255/P Circle Inquiry 574 FINANCIAL SOFTWARE Managing Your Money Has Gotten Simpler MECA Software has introduced a **Windows** version of its Managing Your Money (MYM), to help you manage your banking, investments and taxes. The new version adds a SmartDesk graphical navigator. The SmartDesk appears on-screen as a picture of a traditional office setting, complete with desk, bookcase, file cabinet and **windows** . You can access any program feature by clicking on items in the picture. SmartDesk comes with preset defaults that link standard **Windows** applets, such as Calendar, Calculator and Notepad, to the appropriate SmartDesk icons. Or you can configure the program to launch other applications, such as Lotus Organizer and Microsoft Word, through the SmartDesk. The MYM checkbook allows you to enter a check on either an on-screen check register or a graphical representation of a check. The tax portion of the program includes all the primary tax forms and schedules. Funds that you record in the check register as taxable are automatically recorded in the correct tax schedule. You can open multiple tax **windows** to view current tax status and perform what-if scenarios. MYM's Investment Analysis **window** lets you look at the status of your investments. Views include simple and annual appreciation and yield; MYM also tracks cost, price changes, risk levels, liquidity and other investment data. The SmartPlanner analysis function helps users think through financial questions like Should I buy or lease? or How much life insurance do I need? Advice on each situation comes from financial guru Andrew Tobias. Managing Your Money Price: \$79.95 Contact: MECA Software, 800-820-7457, 203-256-5000 Circle Inquiry 584 Prioritize, Consolidate and Reduce Your Debts Do you feel as though you'll never make a dent in your debts? Getting organized might help. The Debt Analyzer lets you produce debt elimination and loan consolidation schedules, much like the ones generated by credit counselors and banks. The debt elimination schedule prioritizes each debt, and creates a monthly payment schedule. When one debt is paid off, the payment amount previously dedicated to that debt is applied to the highest priority debt. The loan consolidation schedule feature combines all your current debt information into one new loan. Interest rates are configurable as daily, monthly, APR (annual

percentage rate) or annual effective rate. The Debt Analyzer lets you create and print reports, charts, schedules and summaries and includes a filing system with multiple scenarios for individuals, relatives, friends and clients. The Debt Analyzer Price: \$25 Contact: Insight Software Solutions, 801-295-1890, fax 801-299-1781 Circle Inquiry 585 Pay Your Employees Electronically DacEasy Instant Payroll from DacEasy Inc. and Instinctive Payroll from SVS Co. Inc. let you automate your payroll ledger. Instant Payroll automatically calculates federal, state and local taxes for hourly, salaried and commissioned employees. The AutoPay function processes a payroll for multiple frequencies and multiple pay types simultaneously. Instant Payroll also helps you track payment history, vacation and sick time. The program lets you create an unlimited number of earnings, deductions and liabilities. You can create 941 worksheets and print W-2 forms as well as state and quarterly worksheets. Instinctive Payroll calculates three types of hourly rates : regular time, overtime and double-time. It also handles salary, commissions by percentage and commission plus base pay. The software allows you to process bonus pay and electronically file direct deposits. It can also be configured for multiple pay periods and allows unlimited benefits, deductions, additions and tips. Tips can be recorded by allocated tips or tips in addition to gross pay. Instinctive Payroll also lets you issue and track payroll advances. Instinctive Payroll prints information on preprinted forms on tractor-fed or laser-printer checks. It also includes electronic tax filing to transfer tax deposits directly to the bank. DacEasy Instant Payroll Price: \$49.95 Contact: DacEasy Inc., 800-DAC-EASY, 214-248-0205 Circle Inquiry 586 Instinctive Payroll Price: \$59.95 Contact: SVS Co. Inc., 800-787-7287, 208-336-2555 Circle Inquiry 587 HELP AUTHORIZING SOFTWARE Word Add-On Automatically Generates Help Files HelpBreeze 1.6, a

Windows help authoring add-on, has been upgraded to include a Topic Wizard. You specify a list of topics, choose a format, and the Topic Wizard tool automatically structures and formats your help file. It expands your list into fully formatted topics and inserts them into the help document. Topic titles, context strings, keywords and browse sequences are created. The add-on works with Microsoft Word 2.0 or 6.0. Version 1.6 provides point-and-click support for all **Windows** 3.1 Help system features (such as secondary **windows** and help macros). HelpBreeze also offers auto-mated two-way conversion between electronic and printed versions of documents, and support for creating context-sensitive help. Slide Show, a distributable DLL, allows you to include animation, slide shows with VCR-style controls, sound and 256-color graphics within help files. The Slide Show add-on requires a **Windows** resource editor, such as Borland Resource Workshop or Microsoft AppStudio. HelpBreeze 1.6 Price: \$279 Contact: Solutionsoft, 408-736-1431, fax 408-736-4013 Circle Inquiry 581 Make Help Files the Easy Way Doc-To-Help 1.6, a new version of the help authoring tool, includes Hyperformance Tools utilities that assist in the creation, viewing and distribution of hypertext help files. The Doc-To-Help Navigator, one of the new tools, displays the structure of a help file in expandable outline form. You can use it to browse the help file, then jump to any topic in the file through a hypertext link. You can also select and print multiple topics from the Navigator. Other Hyperformance tools allow you to **drag** and drop help files into Visual Basic, and add 256-color bitmaps and watermarks to your help files. Any bitmap can be made into a background watermark and displayed, either centered or tiled, in the Help **window**. Included in the package is a Help System Setup Wizard that allows you to create setup disks for distribution of standalone help systems. It walks you through a seven-step process for building an install program. Doc-To-Help 1.6 Price: \$295 Contact: WexTech Systems Inc., 800-WEX-TECH, 212-949-9595 Circle Inquiry 582 Create Help Files in Word or Ventura Publisher MasterHelp lets you generate **Windows** help files from text created in Microsoft Word or Corel Ventura Publisher. The result is a finished help file that includes hypertext jumps, pop-up screens, secondary **windows** and browse sequences. MasterHelp also automatically creates Microsoft Multimedia Viewer files. You control the design of your help files by specifying template fonts, graphics, tables and indentation. The program automatically creates a table of contents in a secondary **window**, as well as a pop-up **window** with an overview of the entire document or the current chapter. The Help search facility is loaded

with all the topics in your document. An interactive hypertext editor with special macros lets you add extra hypertext jumps. You can convert topic names contained in the text into hot buttons that jump to that topic. You can also create "see also" pop-up listings on additional topics and tag words for inclusion in the search table. MasterHelp Price: \$495 Contact: Performance Software Inc., 804-794-1012, fax 804-794-0210

Circle Inquiry 583

AND Rerun Stat Analyses Without the Hassles STATGRAPHICS Plus, a statistical graphics-analysis tool, lets you save and rerun procedures and analyses without having to create macros or specialized code. The StatFolio feature saves file and variable names, graphics settings and analysis options so that the same analysis can be run on a new data set. The program includes a DDE link to Excel, Lotus 1-2-3 and Quattro Pro. Changes in a linked spreadsheet are automatically reflected in all output and graphics. You can customize your graphics with different fonts, colors and type sizes. Add-on modules (priced at \$399 each) provide simple and multiple regression; ANOVA; one-, two- and multiple-variable analyses; distribution fitting; and tabulation and cross tabulation. STATGRAPHICS Plus Price: \$649 Contact: Manugistics Group Inc., 800-592-0050, 301-984-5123

Are You Sick of Flying Toasters? Create a Windows multimedia slide show or a custom screen saver with ForShow 1.0 from Bourbaki Inc. The authoring program runs in a DOS-based drag-and-drop visual programming environment. The resulting screen saver can run either as a single DOS executable file or under Bourbaki's A Touch of Chaos **Windows**, which comes with ForShow. The program supports a variety of formats, including .BMP, .GIF and .PCX. It also handles .WAV and .VOC sound files, Autodesk Animator (.FLI and .FLC) files and its own fractal file format for graphics. You can set transition effects including venetian blinds, diagonal, drip, explode, spiral, split, weave and wipe delays. The speed and direction of many effects can be specified, and loops can be added. Once your presentation is done, you can run complete shows or selected portions. ForShow also provides an icon-based visual file management system for organizing slide-show elements. ForShow 1.0 Price: \$79 Contact: Bourbaki Inc., 800-289-1347, 208-342-5849

Low-Cost Board Captures Video and Audio The Logitech MovieMan board lets you add video and audio capture to your existing system without breaking the bank. Priced at \$299, the board captures video at a standard television rate of 30 frames per

second and compresses it on the fly for hard disk storage. Video input to the board can be from any analog camera, VCR or cable box that complies with NTSC, the North American TV standard, or with the European PAL standard. MovieMan also supports the Digital Video Connector Interface to allow digital camera output to be fed directly to the board. It supports Microsoft Video for **Windows** and can play .WAV audio files. The board is modular so that it can be upgraded by adding a more powerful compression engine. MovieMan ships with the Adobe Premiere multimedia authoring system, as well as Logitech's FotoTouch color image-editing software for single-frame editing and Logitech's EasyClip, a capture utility that allows for **drag** -and-drop integration of captured images into documents created by OLE-compatible devices. MovieMan Price: \$299 Contact: Logitech Inc. 800-231-7717, 510-795-8500 Circle Inquiry 592

Color Monitor Features High Res, Low Price The VisionMaster 17, a flat -square-tube 17-inch color monitor with a 0.26 dot pitch and 1280x1024 resolution noninterlaced at 80Hz, is priced at \$799. The monitor is Energy Star and Swedish MPRII compliant. At full power, the unit draws 110 watts; power consumption drops to 6 watts in sleep mode. Power management can be set to kick in after 5, 15, 30 or 60 minutes of nonuse. Display controls, which allow user's to make 14 different adjustments to the monitor including raster rotation, pincushion and trapezoid (phase) control and color calibration to match Pantone and device output color samples, are mounted at the front of the monitor. A bezel-mounted LCD displays the current graphics resolution. The VisionMaster 17 monitor features an integrated tilt and swivel base and comes with a three-year warranty as well as an antiglare, antistatic coating. RECORD TYPE: Abstract

ABSTRACT: AskSam Systems' \$149.95 AskSam for Windows can handle both structured and unstructured information. The free-form database offers the same features as other common databases, such as the ability to sort fields and manage reports. However, it goes much further by allowing users to make searches with **several words** or fields, and by not limiting the user to a fixed **data field** structure. It has some features of a word processor, letting users create and edit documents and apply formats. Users can conduct Boolean or proximity searches, and even offers some **personal information management features**. The product is very easy to use, and allows those who are more familiar with the older DOS version to use the command line. Inputting data into the database is easy and flexible. It can be typed directly or imported from elsewhere. The program offers automatic field recognition for importing, and will recognize field identifiers placed in the text to be imported.

You can send and receive messages over a wide area network, modem, LAN or via a wireless connection with cc:Mail Mobile for Windows 2.0. This portable version of the LAN-based e-mail system is aimed at mobile users who only occasionally connect to a LAN. With it, you can automatically filter incoming messages based on a variety of criteria such as

author, date or size to access important messages without having to sort through all of them. The package includes icon-based location profiles, which can be altered with a single **mouse** click, to connect from often visited destinations. More than 40 location icons (hotel, home, office, cities, countries) ship with the product; you can also add your own icons (a corporate logo, for example). Pick lists guide you in setting the communications type, serial port parameters, baud rates and dialing options for each location. The program supports long-distance access and **credit - card** calling. You can select as many as eight communications methods per location, from among such protocols as IPX/SPX (NetWare), TCP/IP (UNIX) and X.25. cc:Mail Mobile also supports connections via ISDN, PBX, direct connection, RAM Mobile Data, cellular and landline modems. The package includes scripts for more than 70 popular modems and supports background operation. A preview function lets you gather information about incoming messages, such as estimated transmission time, subject, priority, author, size and attachment names. cc:Mail Mobile offers built-in support for reconciliation when switching between LAN and remote operation. It moves messages to the computer on departure from the LAN and resynchronizes your LAN mailbox when you reconnect. cc: Mail Mobile 2.0 Price: \$195 Contact: Lotus Development Corp., 800-448- 2500, 415-961-8800 Circle Inquiry 559

Notework Gets an (Inter)Face Lift In the past, the Notework LAN e-mail interface wouldn't have won any beauty contests, but ON Technology has upgraded the program with a **Windows** interface. According to ON Technology, the prior interface was transitional, to provide support for both DOS and **Windows** users. In the new version, a button bar has been added to the pop-up menus. The bar includes icons for such commands as open, create, reply and discard. There is also a Put Away function that allows you to look at e-mail later without having to discard it or place it in a folder. Notework 3.0 offers **Windows** ' Clipboard support, scroll bars, dialog boxes, resizable **windows** and the ability to select your own fonts. The Speed Read function automatically tags new messages and displays the first message upon sign in. You can display incoming and out- going messages side by side. Access UNIX E-Mail with a **Windows** Laptop. Frequent UNIX e-mail users can read and respond to their mail off-line and off- site with PC or laptop using Portable Mail for **Windows** . The software can download UNIX mail files so you can display, save, answer and manipulate mail using the **Windows** GUI . The interface includes an icon bar, accelerator keys for most menu operations, a graphical customization **window** and a status bar. When you get back to your UNIX workstation, Portable Mail can upload mail changes and send replies, delete requested messages, compose multiple messages simultaneously and store flagged messages in mail folders. All off-line actions are automatically reconciled. You can create a remote post office on any **Windows** computer, then transfer files with transfer software or via a diskette. You can perform mail functions, including printing and saving messages, off-line without logging onto your workstation. Portable Mail is compatible with BSD mail and SVR4 mail, and offers cut-and-paste to and from other **Windows** applications. Portable Mail Price: \$195 Contact: Qualix Group Inc., 800-245-8649, 415-572-0200 Circle Inquiry 561

Fax Software/column Get Control of Faxes on the LAN FaxWorks Pro LAN, a network-independent fax software package for small- to medium-sized LANs, lets networked **Windows** users send, receive and manage their faxes. The program does not require a dedicated fax server, and is compatible with several popular peer-to- peer LANs, including Micro- soft **Windows** for Workgroups, Artisoft LANtastic, and Novell NetWare and NetWare Lite. The package includes all the features of SofNet's FaxWorks Pro. Because it has full OCR functionality, FaxWorks Pro LAN does not require you to retype received faxed documents. It has personal and shared telephone books, logs and file cabinets. FaxTracker, the program's document retrieval and storage tool, brings up a document log that lists scheduled and concluded faxes. FaxTracker can also display the results of a search and provides specific fax information, such as the file name, type and size. FaxWorks Pro LAN features automatic Group 4 compression and supports up to eight fax lines per fax server. FaxWorks Pro LAN supports Class 1, Class 2 and

CAS-compatible fax modems (such as Hayes JT Fax, Brooktrout and GammaLink fax modems), and lets you send and receive faxes through electronic mail packages, such as Lotus cc:Mail, Microsoft Mail or any MHS e-mail package. FaxWorks Pro LAN Price: Two -user pack, \$199;/P 10-user pack, \$599; 50-user pack, \$1,799 Contact: SofNet Inc., 800-FAX-WORKS, 404-984-8088 Circle Inquiry 562 Device Lets Fax Machines Handle OCR Trio Information Systems has bundled its DataFax+ Windows 4.1 faxing software with its FaxConverter, a pocket- sized device that converts a fax machine into a scanner or local printer. With the FaxConverter, you can scan a document into your PC or print documents on your fax machine. DataFax+'s optical character recognition (OCR) engine transforms scanned documents into editable text. In the new version of DataFax+, the OCR engine features improved ligature recognition to allow it to distinguish among letters that touch each other, according to Trio Information Systems. Once faxes are OCR-processed, they can be imported into a variety of application formats, including .RTF, ASCII, Lotus 1-2-3, Ami Pro, Excel 2.0, Word for Windows 2.0 or 6.0, WordPerfect 5.0 or 5.1, and Type Reader 1.0. The DataFax software includes a Captive QuickFax icon which lets you clip data from an application, add a fax address and send it. The Smart Dialing feature lets you add country, area and long distance dialing codes to your dialing directory. Also included are a cover page editor, which lets you create language-specific forms in 20 languages, and a Fax Management feature to log incoming and outgoing faxes. DataFax+ 4.1 and FaxConverter Price: \$129 Contact: Trio Information Systems Inc., 800-880-4400 919-846-4990 Circle Inquiry 563 RightFAX Supports Binary File Transfer Binary file-transfer support, which allows files to be faxed as editable documents, has been added to RightFAX 3.5 fax server software. The software lets multiple users on Novell NetWare, Microsoft LAN Manager and IBM OS/2 LAN Server-based networks send and receive faxes from individual workstations. RightFAX 3.5 incorporates direct inward dial, dual tone multi- frequency, OCR, and manual and channel auto routing technologies. The software complies with VIM 2.0 and can operate from within Lotus Notes. With the optional RightFAX E-mail Gateway (\$995), RightFAX 3.5 lets you send and receive faxes directly from e-mail systems. RightFAX includes a **drag** -and-drop feature that allows you to send files as either fax documents or binary data files by **dragging** them onto an icon or **window** . With the RightFAX OCR module, available for \$1,195, RightFAX routes incoming faxes on the basis of key words found on the fax's cover page. You can build routing tables to direct the fax to the recipients with one of **several keywords** associated with that user. If the fax server is busy, an alternate workstation can be used to perform fax routing. RightFAX supports several GammaLink and Brooktrout fax boards, as well as the Brooktrout TR-114 fax cards. RightFAX 3.5 Price: \$995 (license for a single channel, unlimited users); upgrades from RightFAX 3.0, \$99 Contact: RightFAX, 602-327- 1357, fax 602-321-7456 Circle Inquiry 564 Pim/Contact Managers Manage Contacts and Tasks with One Program Time Planner Deluxe 2.0 bridges the gap between PIMs (for tracking names and addresses) and project management systems (for tracking project deadlines and resources). The program is designed for task-oriented users who need reports that compute project times and costs and offer a time-line view of task duration (in working or elapsed hours). TPD supports priorities, alarms, recurring events and **drag** -and-drop scheduling. You can set constraints (hours per day and days per week) or time increments (five minutes or longer), as well as view a graph of allocated costs over time. The address book accommodates three addresses and six telephone numbers per entry, and includes an autodialer. You can also place information in folders and assign a keyword to a folder for automatic assignment to the appropriate folder on the basis of the note's text. Time Planner Deluxe 2.0 Price: \$129; until June 30, \$59 Contact: H.M. Version 2.1 retains familiar features, including the address book, appointment calendar, note keeper, to-do and task list manager and travel expense tracker. The new version adds the ability to send e-mail using Commence's Agent technology. Messages can be sent via popular e-mail messaging protocols, such as MAPI (Microsoft Mail), VIM

(Lotus's cc: Mail and Notes) and CMC . The fuzzy logic global search capability can find information even if you're unsure of the spelling. Version 2.1 includes a report formatter for altering the width and height of items on a report, or for resizing rows and columns with the mouse . Commence can now play sound files or video clips when a predefined situation occurs. The new version also adds user interface features, such as direct appointment entry in the calendar view, maintenance of window size and position, and integrated letter writing support for Word 6.0 and WordPerfect 6.0. Commence 2.1 Price: \$395; upgrades, \$29.95 to \$69.95 depending on version Contact: Jensen-Jones Inc., 800- 688-7080, 908-530-4666 Circle Inquiry 569 Software Ties Up Contact Management Loose Ends CrossTies 1.0 uses patent-pending object- oriented technology to manage information. The program lets you assign a name of up to 256 characters in length to an information item, then link that information to other types of data and view all related items on a single screen. You can drag and drop information between related elements (people, documents or activities) or use the QuickLink button to associate different types of information. CrossTies can store and track information about people in 30 preformatted fields, or in a notes field. You can define templates to prefill fields with standard information and place frequently used objects on the "Shelf" for quick access. The Trail button allows you to access your most recent work. The scheduling module notifies you of upcoming events and prints daily, weekly and monthly calendars. A built-in viewer lets you view documents from a variety of programs. CrossTies 1.0 Price: \$149 Contact: CrossTies Software Corp., 800-955- TIES, 214-407-9996 Circle Inquiry 570 Business Productivity Tools Automate Repetitive Document Production HotDocs helps you build intelligent templates using Word (versions 2.0 and 6.0), WordPerfect (5.2 and 6.0) and Ami Pro (3.0) documents. The templates allow you to create forms that automatically prompt the user to fill in the blanks. The program automates the production of repetitive, routine word processing documents from business letters to loan agreements by letting you identify text that will change with each new document (such as dates, names, adverbs or pronouns) and replace it with a variable. To assemble a document using a finished template, you simply click on a button. The template asks questions based on the user- defined variables and inserts the new information. You can specify formats for the variables, so that information is displayed in the correct format automatically, no matter how it is entered. The program includes options to replace pronouns (his/her) with the proper gender , and can conditionally replace text. HotDocs 1.0 Price: \$99; introductory price, \$49 Contact: Capsoft Development Corp., 800-500- DOCS, 801-375-6562 Circle Inquiry 571 Software Simplifies Employee Evaluations Two new software packages offer help to managers faced with the difficult task of conducting and documenting employee performance reviews. Austin-Hayne's Employee Appraiser using a " writing by example" approach, presents a series of prompts to help managers through the appraisal process, offering suggestions on topics , such as initiative, job knowledge and communication. The program lets managers work with and edit over 400 professionally written phrases and paragraphs developed by human resource and labor law experts. Employee Appraiser can scan the completed appraisal for inappropriate language. When it finds potentially troublesome language , the software offers possible alternatives. The program's Manager's Notebook helps document important events on a day- to-day basis for inclusion in later reviews. Avantos Performance Systems' Review Writer uses a Quick Build mode that leads the review writer through questions that gather key information and a Document mode for more experienced users. Users click on icons to get help in specific areas. The program can import goal and performance information from Avantos' ManagePro, an employee management program. Review Writer can also incorporate comments on objectives and performance recorded in ManagePro. The program can suggest actual text, prompting users to agree or disagree with statements about a performance area or skill. The writer can select all, some or none of the generated review text. The program includes predefined sample templates for general job titles, such as managers, team leaders and customer service agents. Its AdvisorScan searches for inflammatory or "dangerous" language and offers alternative wording. Employee Appraiser 1.0 Price: \$129 Contact : Austin-Hayne Corp., 800-809-9920, 415-610-6800

FINANCIAL SOFTWARE Managing Your Money Has Gotten Simpler MECA Software has introduced a **Windows** version^{*} of its Managing Your Money (MYM), to help you manage your banking, investments and taxes. The new version adds a SmartDesk graphical navigator. The SmartDesk appears on-screen as a picture of a traditional office setting, complete with desk, bookcase, file cabinet and **windows**. You can access any program feature by clicking on items in the picture. SmartDesk comes with preset defaults that link standard **Windows** applets, such as Calendar, Calculator and Notepad, to the appropriate SmartDesk icons. Or you can configure the program to launch other applications, such as Lotus Organizer and Microsoft Word, through the SmartDesk. The MYM checkbook allows you to enter a check on either an on-screen check register or a graphical representation of a check. The tax portion of the program includes all the primary tax forms and schedules. Funds that you record in the check register as taxable are automatically recorded in the correct tax schedule. You can open multiple tax **windows** to view current tax status and perform what-if scenarios. MYM's Investment Analysis **window** lets you look at the status of your investments. Views include simple and annual appreciation and yield; MYM also tracks cost, price changes, risk levels, liquidity and other investment data. The SmartPlanner analysis function helps users think through financial questions like Should I buy or lease? or How much life insurance do I need? Advice^{*} on each situation comes from financial guru Andrew Tobias. Managing Your Money Price: \$79.95 Contact: MECA Software, 800-820-7457, 203-256-5000 Circle Inquiry 584

Prioritize, Consolidate and Reduce Your Debts Do you feel as though you'll never make a dent in your debts? Getting organized might help. The Debt Analyzer lets you produce debt elimination and loan consolidation schedules, much like the ones generated by credit counselors and banks. The debt elimination schedule prioritizes each debt, and creates a monthly payment schedule. When one debt is paid off, the payment amount previously dedicated to that debt is applied to the highest priority debt. The loan consolidation schedule feature combines all your current debt information into one new loan. Interest rates are configurable as daily, monthly, APR (annual percentage rate) or annual effective rate. The Debt Analyzer lets you create and print reports, charts, schedules and summaries and includes a filing system with multiple scenarios for individuals, relatives, friends and clients. The Debt Analyzer Price: \$25 Contact: Insight Software Solutions, 801-295-1890, fax 801-299-1781 Circle Inquiry 585

Pay Your Employees Electronically DacEasy Instant Payroll from DacEasy Inc. and Instinctive Payroll from SVS Co. Inc. let you automate your payroll ledger. Instant Payroll automatically calculates federal, state and local taxes for hourly, salaried and ^{*}commissioned employees. The AutoPay function processes a payroll for multiple frequencies and multiple pay types simultaneously. Instant Payroll also helps you track payment history, vacation and sick time. The program lets you create an unlimited number of earnings, deductions and liabilities. You can create 941 worksheets and print W-2 forms as well as state and quarterly worksheets. Instinctive Payroll calculates three types of hourly rates: regular time,

overtime and double-time. It also handles salary, commissions by percentage and commission plus base pay. The software allows you to process bonus pay and electronically file direct deposits. It can also be configured for multiple pay periods and allows unlimited benefits, deductions, additions and tips. Tips can be recorded by allocated tips or tips in addition to gross pay. Instinctive Payroll also lets you issue and track payroll advances. Instinctive Payroll prints information on preprinted forms on tractor-fed or laser-printer checks. It also includes electronic tax filing to transfer tax deposits directly to the bank.

Windows help authoring add-on, has been upgraded to include a Topic Wizard. You specify a list of topics, choose a format, and the Topic Wizard tool automatically structures and formats your help file. It expands your list into fully formatted topics and inserts them into the help document. Topic titles, context strings, keywords and browse sequences are created. The add-on works with Microsoft Word 2.0 or 6.0. Version 1.6 provides point-and-click support for all **Windows** 3.1 Help system features (such as secondary **windows** and help macros). HelpBreeze also offers auto-mated two-way conversion between electronic and printed versions of documents, and support for creating context-sensitive help. Slide Show, a distributable DLL, allows you to include animation, slide shows with VCR-style controls, sound and 256-color graphics within help files. The Slide Show add-on requires a **Windows** resource editor, such as Borland Resource Workshop or Microsoft AppStudio. HelpBreeze 1.6 Price: \$279 Contact: Solutionsoft, 408-736-1431, fax 408-736-4013 Circle Inquiry 581 Make Help Files the Easy Way Doc-To-Help 1.6, a new version of the help authoring tool, includes Hyperformance Tools utilities that assist in the creation, viewing and distribution of hypertext help files. The Doc-To-Help Navigator, one of the new tools, displays the structure of a help file in expandable outline form. You can use it to browse the help file, then jump to any topic in the file through a hypertext link. You can also select and print multiple topics from the Navigator. Other Hyperformance tools allow you to **drag** and drop help files into Visual Basic, and add 256-color bitmaps and watermarks to your help files. Any bitmap can be made into a background watermark and displayed, either centered or tiled, in the Help **window**. Included in the package is a Help System Setup Wizard that allows you to create setup disks for distribution of standalone help systems. It walks you through a seven-step process for building an install program. Doc-To-Help 1.6 Price: \$295 Contact: WexTech Systems Inc., 800-WEX-TECH, 212-949-9595 Circle Inquiry 582 Create Help Files in Word or Ventura Publisher MasterHelp lets you generate **Windows** help files from text created in Microsoft Word or Corel Ventura Publisher. The result is a finished help file that includes hypertext jumps, pop-up screens, secondary **windows** and browse sequences. MasterHelp also automatically creates Microsoft Multimedia Viewer files. You control the design of your help files by specifying template fonts, graphics, tables and indentation. The program automatically creates a table of contents in a secondary **window**, as well as a pop-up **window** with an overview of the entire document or the current chapter. The Help search facility is loaded with all the topics in your document. An interactive hypertext editor with special macros lets you add extra hypertext jumps. You can convert topic names contained in the text into hot buttons that jump to that topic. You can also create "see also" pop-up listings on additional topics and tag words for inclusion in the search table. MasterHelp Price: \$495 Contact: Performance Software Inc., 804-794-1012, fax 804-794-0210 Circle Inquiry 583 AND Rerun Stat Analyses Without the Hassles STATGRAPHICS Plus, a statistical graphics-analysis tool, lets you save and rerun procedures and analyses without having to create macros or specialized code. The StatFolio feature saves file and variable names, graphics settings and analysis options so that the same analysis can be run on a new data set. The program includes a DDE link to Excel, Lotus 1-2-3 and Quattro Pro. Changes in a linked spreadsheet are automatically reflected in all output and graphics. You can customize your graphics with different fonts, colors and type sizes. Add-on modules (priced at \$399 each) provide simple

and multiple regression; ANOVA; one-, two- and multiple-variable analyses; distribution fitting; and tabulation and cross tabulation. STATGRAPHICS Plus Price: \$649 Contact: Manugistics Group Inc., 800-592 -0050, 301-984-5123 Circle Inquiry 588

Keep Yourself Informed the Windows Way
If you're tired of finding a soggy newspaper on your front porch, maybe you should look to your computer for the latest scoop instead. Mainstream Newscast for **Windows**, a wireless information service, broadcasts real-time news on FM radio (in a dozen major U.S. cities) and by satellite (in more remote areas) to a receiver attached to the PC's serial port. Mainstream Newscast software receives and displays stories from the news services to which you subscribe. More than 150 information services including Associated Press, Reuters, Market News Service, PR Newswire, Business Wire and Federal News Service are available, with subscription prices starting at \$10 per month. You can view the incoming news live, collect it in the background, or cut and paste it into e-mail (depending on the terms of the news service). You can set up to 32 search criteria on topics such as information technology and sort the news you receive into different **windows** according to topic. PDAs the Next Generation

Review

So far, the emphasis of PDAs has been on the ``personal,`` but these small devices can fill a niche role for businesses, as well.

You'll never guess who wants to be your phone company. (effects of telecom deregulation) (Industry Trend or Event)
Bruneau, Mark R.
Telecommunications, v31, n10, p61(5)
Oct, 1997
ISSN: 0278-4831 LANGUAGE: English RECORD TYPE: Fulltext; Abstract
WORD COUNT: 2336 LINE COUNT: 00283

ABSTRACT: The Telecommunication Act of 1996 affects every customer and provider by redefining who provides telecommunication services, what services will be available and how customers will buy them. Competition is already driving down prices, and providers are entering new markets. The range of services will broaden, and traditional distinctions between voice and data, wireless and wire-line, and local and long-distance will blur as services are bundled in new ways. AT&T has downsized while regional Bell companies are becoming integrated carriers involved in a variety of services. Mergers are consolidating the RBOCs into a handful of 'super-regionals.' Today's paradigm is characterized by dedicated lines and services, acquired software and computing assets and a wireless infrastructure that is adequate for voice but not data. It will soon be replaced with a paradigm in which voice, data and video are integrated, universal wireless transmission is available for voice and data and intelligent networks support communities of interest.

SET 1.0 ready to go. (Secure Electronic Transaction standard) (Technology Information)
Greenemeier, Larry
MIDRANGE Systems, v10, n11, p41(1)
July 11, 1997
ISSN: 1041-8237 LANGUAGE: English RECORD TYPE: Fulltext; Abstract
WORD COUNT: 900 LINE COUNT: 00075

ABSTRACT: In a major step in the direction of the establishment of electronic commerce, Visa International and MasterCard International announce the publication of the Secure Electronic Transaction (SET) protocol. With the announcement of SET 1.0, which is also supported by major vendors such as IBM, the evolution of electronic commercial activity enters a crucial second stage, contends IBM VP of electronic payments Mark Greene. According to Greene, this stage involves the education of consumers and actual implementation in the marketplace. IBM's market research indicates that consumers remain concerned about data security issues, which SET is designed to resolve. The protocol offers a platform for the development of electronic commerce software which is SET-compliant.

ABSTRACT: A review of four personal finance packages reveals that these programs can go a long way in bringing order to a person's finances. The four programs include Intuit's \$59.99 Quicken for Windows, Microsoft's \$34.95 Money, 4Home Production's \$35 Kiplinger's Simple Money and MECA Software's \$45 Managing Your Money Plus. Quicken gets the best overall rating of the programs tested. Each program is compared with the others in a variety of applications including managing credit-card balances, investing in the stock market, checkbook management, handling cash flow and electronic **forms** of paying bills. With all of these programs, managing personal finances is not only easy, but can also be fun.

ABSTRACT: Twelve Internet-commerce tools are reviewed. Four of the ten are designed primarily for Web start-ups, while the others are suited to larger businesses. Viaweb Inc's Viaweb Store 3.0 is the Editors' Choice in the first category. It is the only product tested that is solely vendor-hosted and lets online newcomers build entire storefronts through a Web browser. The program is very sophisticated, with editing, publishing and reporting features that rival those of higher-end products. iCat's Electronic Commerce Suite 3.0, Professional Edition is rated an Editors' Choice for larger E-commerce sites. Electronic Commerce Suite is robust and mature, with the best **selection** of storefront templates, new ODBC support and remote administration. The package includes Sybase's SQLAnywhere database. Lotus' Domino.Merchant is a good choice for Notes and Domino shops, but others will find it hard to use. Microsoft's Site Server 2.0 provides a sound site infrastructure, but requires more work to customize than other products.

Creator 4.0 and Peachtree Software's PeachLink, which integrates with
Peachtree Complete Accounting...

...block for most products. While all of the packages provided some
mechanism to import data from open **formats** (comma-delimited,
tab-delimited, and so forth), they all had to massage the data to fit into

...

...Commerce proved the most difficult. We were forced to write the data out to a proprietary "loading" **format** before importing.

Some of the entry-level packages simply could not complete that portion of our tests...Electronic Commerce Suite, offer only proprietary scripting languages. However, Electronic Commerce Suite also comes with the best **selection** of templates (or "layouts," as they're called in the product), allowing you to get up and...

...users via CGI scripts.SHOPPING CARTS

Virtual shopping carts enhance the shopping experience by allowing customers to **select** items for purchase and continue browsing the store--or even leave the store and return later--before...Suite 3.0, Professional Edition. A more robust solution suitable for any size business, it has some **formidable** competitors. Nevertheless, this mature e-commerce solution is up to the challenge. Electronic Commerce Suite includes the best **selection** of storefront templates. New to this version are ODBC support, remote site administration via a browser, and...

...or component. For example, all ActiveX controls transmitted over the Web are digitally signed by their creators.

Electronic wallet Also called a virtual wallet; a software mechanism that allows commerce server users to store and use...

...lets you control every aspect of your site. Managing shipping requires little effort: A series of HTML **forms** takes you through the entire process and makes it easy to configure multiple shipping tables in just...

...your site is amazingly simple. You can upload graphics (provided that your browser supports this ability) or **select** from a massive library of GIFs on the Virtual Spin server.

Setting up your site to use...relish the power it provides.

Cat@log Builder does not offer an integrated authoring tool. You must **select** external tools for authoring, and you can **choose** both a WYSIWYG editor such as Microsoft FrontPage and a text editor. Cat@log Builder's IDE ...

...and export it to a Microsoft Excel spreadsheet template.

Cat@log Builder is not the product to **choose** if you want to open your virtual shopping doors immediately. But its component-based approach provides maximum...before it fit into the database's fixed schema. Data Entry Manager also lets you store, organize, **format**, search, sort, and report on the data.

If your site requires customization or additional functionality (such as...

...com.

iCat's Electronic Commerce Suite includes a proprietary scripting language called Carbo for customizing your site.

Forman Interactive Corp.: Internet Creator

More like a Web-site authoring environment than an e-commerce tool, **Forman** Interactive Corp.'s Internet Creator 4.0 (\$149 list) enabled us to create a Web site--complete with company information, shipping tables, ordering **forms**, and more--in under an hour. Like most entry-level authoring tools, Internet Creator is easy to...

...Creator lets you add new items to your store manually or import them from a variety of **formats** into the program's database system. It also provides a number of stock fields for your store...

...listed in a drop-down box, enhancing the end-user experience.

Like most vendors in this category, **Forman** Interactive will host the site for you. Company-provided server space at [www .register.com](http://www.register.com) hooks your ...

...make changes locally, Internet Creator tracks which pages have changed and offers to upload incremental changes only.

Forman Interactive's Merchant Management System (MMS) supplies site management tools that are accessible through your browser. The...or better, 8MB RAM, 10MB hard disk space, Microsoft Windows 95, 3.x, or NT 4.0.

Forman Interactive Corp., Brooklyn, NY; 718-522-2260; fax, 718-522-0267; www. **forman** .com.

Internet Creator has an Explorer-like authoring environment that displays the site's structure.

Intershop Communications...

...a library to create Notes databases--one database for each site area you specified in the configuration-- **forming** the shell of your site.

It is important to note that of the products we reviewed, only...that haven't committed to either. ActiveX is also part of the mix, providing shoppers' member registration **forms** with a Windows 95 look and feel.

Site Server's database management approach proved to be its...

...data to DB2, we first had to write an application for converting the data into a proprietary **format** . As a result, Net.Commerce fared the worst on this portion of our tests.

Although we didn...

...provides a basic WYSIWYG interface for creating HTML templates. A wizard built into Template Designer helps you **select** the proper database tables and fields for display and guides you through the process of embedding SQL ...INP (Instant Net Presence). Building your Web site with TrustedLink INP is a breeze, and as with **Forman** Interactive Corp.'s Internet Creator, it can be done in less than an hour. You simply open a worksheet and provide information as the program prompts you during an interview process. You can **choose** from predefined Web site styles, and if you don't want to include a particular worksheet as part of your Web site, simply **select** the Exclude Step option from the Tools menu. Graphics, such as your company logo or images of products in your company line, can be added to **selected** worksheets.

Publishing your site is as easy as building it. Site hosting is provided by Harbinger. Once...

...step process. First, you enter all of your product information. Then you build the pages that will **form** the basis of your site. Finally, you "assign," or link, the products to the appropriate pages. And...fax, 801-373-7211; www.icentral.com.

In ShopSite, you enter your products, build the pages that **form** the basis of your site, and then assign products to these pages.

Viaweb Inc.: Viaweb Store

sort of Good Housekeeping seal of approval" for compliance with the emerging SET standard for secure electronic commerce.

In an interview with Newsbytes, Ken Mohr, Spyrus marketing director, said that, after additional rounds of compliance testing with the Tenth Mountain certificate authority (CA), SETCo, an organization established by Visa and MasterCard, will also award SET marks to companies producing implementations of the three other elements of SET.

Beyond the **electronic wallet**, for "holding" the end user's digital certificates, SET's elements include the merchant POS (point-of-sale) application; the financial processor gateway; and the root CA, according to Mohr.

Spyrus, for example, produces WebWallet, an **electronic wallet** customizable for branding purposes, along with application development kits for all four SET elements, the marketing director told Newsbytes. Spyrus acquired Terisa Systems, a producer of SET development software, in late 1997.

Mohr described the digital certificate as a "credential" in ASCII text, linked to public and private cryptographic keys to **form** a unique identifier. "And, of course, the same user can have more than one identifier," he observed.

Aside from WebWallet, other electronic wallets that were granted SET marks today included the GlobeSet Wallet; VeriFone's vWallet; and Trintech's PayPurse.

The newly certified vendors will now be able to use the SET mark logo in marketing their **electronic wallet** wares, said Mohr.

Even before today's announcement, the four companies were aware that their wallet products were "pending enrollment" for SET 1.0 compliance, according to a GlobeSet spokesperson.

Information on other SET products that are "pending enrollment" is posted on SetCo's World Wide Web site, at <http://www.setco.org>, the GlobeSet rep told Newsbytes.

Mohr told Newsbytes that, after proving compliance with the SET standard, the next step for SET products is multivendor interoperability testing.

Also today, Spyrus and GlobeSet announced test results showing interoperability between Spyrus Wallet and the GlobeSet POSTM point-of-sale merchant server, he noted. Other SET products from GlobeSet include GlobeSet CATM, for digital certificate management, and GlobeSet Gateway.

In addition to the PayPurse wallet, Trintech produces two other offerings in the SET arena: PayWare merchant software and the PayGate banking gateway.

VeriFone's SET line-up encompasses vPOS software for merchants and the vGATE financial gateway, as well as vWallet.

Mohr maintained that, although all four vendors' electronic wallets have now been certified as compliant with SET 1.0, the products are differentiated on the basis of features.

Spyrus further differentiates itself through its application development tools, and the customizability of its WebWallet, the marketing director added.

Spyrus also created "SET Ref," a reference model available through SETCo to other companies interested in building SET products. Alternatively, for ease of development, other vendors can use Spyrus's application development kits, Newsbytes was told.

Spyrus is selling its own WebWallet to OEMs (original equipment manufacturers), for quickly customizable, "branded" implementations by banks and retailers, for instance.

This model has strong parallels in today's world of plastic credit cards and debit cards, Mohr suggested.

A bank, for example, might offer customers a free WebWallet -- "branded, of course, in its own name" -- as an incentive to opening a checking account, he illustrated.

Spyrus' Java-based WebWallet gives consumers a graphic interface for dragging-and-dropping a **selected** credit card into a payment slip, along with a transaction log, a sort of "check register" for cyberspace.

Additional information is available on the Web at <http://www.spyrus.com>; <http://www.verifone.com>; <http://www.globeset.com>; and <http://www.trintech.com>.

* Policy 4 has criteria A 5 and B IN (21, 22).

Therefore, the customer could be offered policies 1, 2; and 3, but not 4. Policy 3 should be ranked the highest, because it matches the most criteria and returned as the answer. Policy 1 should be second highest, and Policy 2 should be last, but lets not worry about presenting alternatives yet.

Puzzle Answer

Joe Celko

The trick in this problem is that the losses are presented as attributes in the Losses table and as values in the Policy Criteria table. This messes up the data model and means that you have to convert one table to match the other. I will pick the Losses table and flatten it out like this. This might be done with a VIEW, but I am going to show it as a working table:

```
CREATE TABLE LossDoneRight (cust_nbr INTEGER NOT NULL, criteria
CHAR(1) NOT NULL, crit_val INTEGER NOT NULL)
```

Here is how you transform values to and from attributes:

```
INSERT INTO LossDoneRight (cust_nbr, criteria, crit_val) SELECT
cust_nbr, 'A', a FROM Losses WHERE a IS NOT NULL UNION ALL SELECT
cust_nbr, 'B', b FROM Losses WHERE b IS NOT NULL UNION SELECT cust_nbr,
'C', c FROM Losses WHERE c IS NOT NULL UNION SELECT cust_nbr, 'D', d FROM
Losses WHERE d IS NOT NULL UNION SELECT cust_nbr, 'E', e FROM Losses
WHERE e IS NOT NULL UNION SELECT cust_nbr, 'F', f FROM Losses WHERE f IS
NOT NULL UNION SELECT cust_nbr, 'G', g FROM Losses WHERE g IS NOT NULL
UNION SELECT cust_nbr, 'H', h FROM Losses WHERE h IS NOT NULL UNION
SELECT cust_nbr, 'I', i FROM Losses WHERE i IS NOT NULL UNION SELECT
cust_nbr, 'J', j FROM Losses WHERE j IS NOT NULL UNION SELECT cust_nbr,
'K', k FROM Losses WHERE k IS NOT NULL UNION SELECT cust_nbr, 'L', l FROM
Losses WHERE l IS NOT NULL UNION SELECT cust_nbr, 'M', m FROM Losses
WHERE m IS NOT NULL UNION SELECT cust_nbr, 'N', n FROM Losses WHERE n IS
NOT NULL UNION SELECT cust_nbr, 'O', o FROM Losses WHERE o IS NOT NULL;
```

Now we have a relational division problem:

```
SELECT L1.cust_nbr, 'could use policy', C1.criteria id, COUNT(*) AS
score FROM LossDoneRight AS L1, Policy_Criteria As C1 WHERE L1.criteria =
C1.criteria AND L1.crit_val = C1.crit_val GROUP BY L1.cust_nbr, C1.
criteria_id HAVING COUNT(*) = ( SELECT COUNT(*) FROM LossDoneRight AS L2
WHERE L1.cust_nbr = L2.cust_nbr);
```

In English, you join the losses and criteria together. If the loss was able to match all the criteria (in other words, has the same count) in the Policy Criteria description, we keep him or her it is a one-to-one mapping of the two tables, but one of them can have leftovers and the other cannot.

You can tune this by making equality into a greater than or equal, a less than or equal, or a BETWEEN predicate. The largest execution is building the LossDoneRight table
